PRESSURE SAFE LLC.

Certificate of Analysis Microbiological testing is done using the 3M Molecular Detection System platform. This system is validated and certified as a Performance Tested Method by the AOAC research institute as an effective method for the detection of E. Coli O157 (including H7), Salmonella, and Listeria in food.

Products are tested as a composite of a day's freeze dry production. L.mono results are per a 25g sample from the composite. E. Coli results are per a 375g sample pulled from the composite. Salmonella results are per two individually pulled 375g samples from the composite.
