**REPORT OF ANALYSIS**

For: (35416) OPEN FARM INC

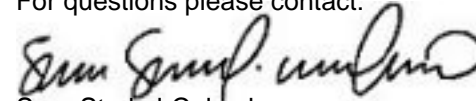

Lot/PO# 36119

Chicken Gently Cooked Recipe

**Detailed Method Description(s)****E. coli and Total Coliform using 3M Petrifilm**

Sample analysis follows MWL MI 292 which is based on AOAC 991.14. A representative sample is obtained and added to phosphate buffer. Aliquots of the sample are withdrawn and placed on Petrifilm plates. The plates are incubated for 48 hours. After incubation, the plates are counted to determine the number of generic E. coli and total coliforms present. The color of the colony and the presence of gas differentiate a generic coliform from E. coli. The levels are reported as colony forming units (cfu).

**Salmonella - Lateral Flow**

Samples are analyzed following MWL MI 195 which is based on the RapidChek Select Salmonella User Guide. A representative sample is obtained and combined with a selective media and allowed to incubate. After incubation, a test strip is used for Salmonella determination. Results are reported as negative or presumptive positive.

**Listeria Lateral Flow**

Samples are analyzed following MWL MI 194 which is based on the RapidChek Listeria User Guide. A representative sample is obtained and combined with a selective growth media. It is incubated for 40-48 hours. After incubation, an aliquot is heated for 10 minutes, and a test strip for Listeria detection is used. Results are reported as negative or presumptive positive. This procedure does not speciate Listeria.

**E coli O157:H7 - Lateral Flow**

Samples are analyzed following MWL MI 171 which is based on the RapidChek HEC User Guide. A representative sample is obtained and combined with a selective media. It is incubated for 10 hours. After incubation, a test strip is used for HEC O157:H7 determination. Results are reported as negative or presumptive positive.

The result(s) issued on this report only reflect the analysis of the sample(s) submitted.
